

TensorShield

The fractional autonomous security team for SMBs —
with a human always on the loop.

A self-hosted AI security & compliance team that runs continuously, fixes what it finds (with your approval), and produces audit-ready evidence — without your data ever leaving your environment.

— THE THESIS

A 50-person company gets the security posture of a 5,000-person company — for less than one part-time analyst.

Fractional

Rent an always-on team instead of hiring a \$180K engineer you can't find.

Autonomous

It scans, triages, prioritizes & drafts fixes by itself — continuously.

Human-in-the-loop

Never makes an irreversible change without a person's approval.

Sovereign

Runs in *your* environment. Your findings never leave your perimeter.

Existing tools find problems and hand SMBs a list. **TensorShield is the team that acts on the list.**

— THE PROBLEM

Every SMB is now a target. Almost none can staff for it.

The security work still has to happen — there's just no one to do it.

43%

of cyberattacks hit small businesses — yet ~⅓ have **no dedicated security staff**.

4.8M

unfilled cybersecurity jobs globally (ISC2 2025). A \$150–220K hire an SMB can't win.

+40%

projected rise in ransomware against SMBs by end of 2026 vs. 2024.

\$1.76M

higher average breach cost when a security-staff shortage exists.

THE REAL GAP

- ◆ **The tooling trap.** Snyc, Tenable, Wiz hand you a *list* of 800 findings. Someone has to fix them. SMBs have no one.
- ◆ **The compliance squeeze.** SOC 2 / HIPAA / PCI are now sales blockers — no badge, no enterprise deal.

The gap isn't detection. It's the team that acts on detection — and an SMB can't hire one.

— WHY NOW

Four curves crossed at once — for the first time.

01 · AGENTIC AI IS READY

The bottleneck just got automatable

LLM agents now do the triage & remediation that needed a human. Omdia tracks **50+ agentic-SOC startups**; \$3.6B+ poured in — but all chasing *enterprise*. *The SMB is wide open*.

02 · DETECTION WENT FREE

The moat moved up the stack

nuclei, semgrep, trivy, prowler — best-in-class detection is open-source. The question is no longer *who detects*, but **who acts, and who you trust with the data**.

03 · COMPLIANCE WOKE THE BUDGET

Vanta & Drata proved SMBs pay

\$2.45B Vanta valuation, 8,000+ customers. They built the buying motion — but stop at evidence collection. *They don't do the security*.

04 · SOVEREIGNTY IS A REQUIREMENT

"Send us your data" now kills deals

Data-residency law, AI-governance rules & board paranoia make multi-tenant SaaS a non-starter for a growing slice. **SaaS incumbents can't answer it**.

— MARKET

SMBs are now the **majority of global security spend** — and the **worst-served**.

TAM · Global SMB security + compliance spend

\$76B (2022) → ~10% CAGR · SMBs = ~60% of global cyber spend

\$109B

SAM · Compliance-driven & regulated SMBs

~250K target SMBs × ~\$25K blended ACV (detect → fix → prove + host) **~\$6B**

SOM · 3-yr capture, direct + channel

~2,500 tenants via direct + MSP partners **~\$40M**
<1% of SAM

The Vanta / Drata / Secureframe / Sprinto category already serves ~25K+ compliance-driven SMBs at single-digit penetration — the target universe is real and barely tapped.

BUDGETS WE CONSOLIDATE INTO ONE LINE

- ◆ SMB security spend doubled as a share of IT budget — 6% → 14% (2019→2024)
- ◆ MSSP / MDR: **\$43B** in 2026 · MDR fastest-growing at **+17.8% CAGR**
- ◆ vCISO: growing ~15% CAGR · replaces a \$250–600K CISO line
- ◆ Compliance automation: the proven Vanta/Drata SMB willingness-to-pay

We don't need a new budget — we collapse the analyst + tools + audit prep + MDR retainer into one subscription.

— THE SOLUTION

An AI security team you deploy like a container.

It runs the full lifecycle a human team would — continuously, not point-in-time.

A HUMAN SECURITY TEAM...

Inventories what to defend

Scans everything, every week

Triages 800 alerts to the 12 that matter

Writes the fix / opens the ticket

Gets sign-off before touching prod

Produces the audit evidence

TENSORSHIELD...

→ Connects GitHub, cloud, Google Workspace / M365 / Okta — builds the asset map

→ Continuous monitoring across 8 asset types + identity posture

→ AI prioritizes, correlates into attack chains, kills false positives

→ Drafts the PR, the config change, the identity runbook — grounded in evidence

→ **Stops at a human gate** for anything risky or irreversible

→ Signed, framework-mapped evidence across **14 compliance frameworks**

Competitors sell a **dashboard of problems**. We deliver a **security function** — and remove security from the SMB's to-do list.

— WHAT MAKES "AUTONOMOUS" SELLABLE

Two trust primitives competitors can't bolt on.

01 · HUMAN-IN-THE-LOOP — SAFE BY CONSTRUCTION

- ◆ Tiered autonomy — reversible actions auto-apply; anything that mutates prod **queues for human approval**
- ◆ Irreversible actions require a **named human signature** — the agent *cannot* run them on auto. Enforced in code.
- ◆ One global **kill-switch** halts all autonomy instantly · every decision signed into a tamper-evident ledger

"It works while you sleep, but can't do anything you'd regret — and you can prove every move it made."

02 · SOVEREIGN — THE WEDGE SAAS CAN'T COPY

- ◆ Runs in your environment — `docker compose up`, on-prem, your VPC, in-country cloud. **Data never leaves your perimeter.**
- ◆ Detection engine is deterministic & LLM-free; the AI reasons inside *your* boundary. **We can't leak what we never hold.**
- ◆ Every finding ships a **signed, independently-verifiable attestation** — trust without trusting us.

| Opens the regulated / government / EU doors SaaS security structurally cannot.

COMPETITIVE LANDSCAPE

Everyone owns one quadrant. Nobody owns the whole square.

	Finds vulns	Acts / remediates	Continuous	Compliance evidence	Self-hosted sovereign	SMB-priced
Scanners — Snyk, Tenable, Wiz	✓	✗	🌙	add-on	✗	✗
Compliance — Vanta, Drata	✗	✗	✓	✓	✗	✓
MSSP / MDR	✓	🌙	✓	manual	✗	✗
Agentic SOC — Dropzone, Prophet	🌙	🌙	✓	✗	✗	✗
Offensive AI — XBOW	✓	✗	🌙	✗	✗	✗
vCISO (human)	🌙	🌙	✗	manual	n/a	✗
TensorShield	✓	✓	✓	✓	✓	✓

Vanta/Drata proved SMBs pay — but collect evidence, don't *do* security. We start where they stop.

Dropzone (\$57M) / XBOW (\$120M, \$1B+) prove the agentic thesis — but built for enterprises that already have a SOC.

MSSP/MDR is humans-in-a-room: costly, monitoring not fixing, your data in their cloud. We're the software that scales it.

— DISTRIBUTION IS THE MOAT · PART 1

MSPs & vCISOs are hunting for exactly this engine.

- ◆ **~74% of MSPs** not yet offering vCISO planned to add it — the rest target 2026. They have the SMB relationships; what they lack is a **scalable engine**.
- ◆ **TensorShield is that engine.** White-label, multi-tenant, self-hosted, governed. One partner runs *hundreds* of clients on one deployment.
- ◆ **We power the channel, not compete with it.** The MSP keeps the relationship & margin; the human-on-the-loop *is their vCISO*, now leveraged 10x.

One channel partner = hundreds of tenants, near-zero CAC per logo. The hard one-at-a-time SMB sale becomes a fan-out machine.

THE FAN-OUT

— DISTRIBUTION · PART 2

Three motions, sequenced — channel for scale, direct for proof.

01 · PLG TOP-OF-FUNNEL

Free, viral, zero-data

A public "how exposed is yourdomain.com?" score. Instant value, no signup, no data handed over. Founder-led, bottom-up, near-zero CAC.

02 · COMPLIANCE-LED — THE CLOSER

SOC 2 / HIPAA on autopilot

Sell to the person who owns the deal-blocking audit — not a CISO who doesn't exist at an SMB. The proven Vanta motion, but we **do the security**, not just the checklist.

03 · SOVEREIGN — THE MARGIN TIER

Land-and-expand, regulated

Government suppliers, defense-adjacent, health & fintech — where "self-hosted + signed evidence" wins deals SaaS can't bid on.

THE SEQUENCE — NRR ENGINE BUILT IN

free assessment → land one connector → compliance unlock → expand to full monitoring → graduate to channel + sovereign tier

Time-to-value is **minutes, not a quarter**. We don't add to the SMB's to-do list — we remove a function from it.

BUSINESS MODEL

Priced as a fractional hire. Billed as software. Multiplied by the channel.

Core subscription

Per-tenant, tiered by connected systems. ~\$15–30K/yr — vs. an ~\$80K part-time hire or a \$250–600K CISO. Replaces the analyst + point tools + MDR retainer.

Compliance pack

Premium add-on. Highest willingness-to-pay — the signed evidence directly unblocks the customer's *own* revenue.

Sovereign / on-prem tier

Higher ACV for regulated & government buyers — KMS, air-gap, HA. **The margin tier.**

Channel / white-label

Per-seat or rev-share with MSPs & vCISOs. Volume economics — they carry the CAC.

Land cheap, expand fast, monetize depth, multiply through partners. **Multiple expansion vectors on one platform.**

— DEFENSIBILITY

Why we win — and why it compounds.

Architectural sovereignty

Multi-tenant SaaS incumbents can't retrofit "your data never leaves." Built that way from the boundary up — a moat that **can't be feature-flagged**.

Channel lock-in

An MSP that standardizes delivery on us brings their whole book. Ripping us out means re-training their entire service line.

Trust compounds into autonomy

The signed-ledger + HITL track record means the longer we run safely, the more autonomy the customer grants, the deeper we embed.

System-of-record switching cost

We become the source of truth for posture, compliance evidence & the decision ledger. Leaving means losing the audit trail.

| OSS leverage, not dependence — community detection improvements flow to us free; our value is the governed, sovereign team and the compliance graph on top.

— TRACTION & ROADMAP

The hard, trust-critical core is **already built**.

SHIPPED · DE-RISKED

- ◆ Full autonomous loop wired end-to-end — connect → scan → detect → propose → human-gate → apply → signed ledger
- ◆ 8 asset types + 3 identity providers live
- ◆ 14 compliance frameworks with signed evidence
- ◆ Global kill-switch · containerized single-box deploy

NEXT 12 MONTHS · WHAT CAPITAL BUYS

- ◆ Design partners → first paying SMBs (compliance-led)
- ◆ **Launch the MSP / vCISO channel program** — the distribution flywheel
- ◆ Deepen the agentic SOC · broaden connectors
- ◆ Regulated-tier hardening (HA, cloud-KMS) + our own SOC 2 / FedRAMP path

MILESTONES TO SERIES A

First ~\$1M ARR · first cohort of paying tenants · first signed **MSP/vCISO channel partners** (the fan-out proof) · first 1–2 sovereign/regulated logos · a self-serve free-assessment funnel feeding pipeline

— THE OPPORTUNITY

The security team every SMB needs and **none can hire —
autonomous enough to matter, governed enough to trust,
sovereign enough to own, and distributed through the
partners who already own the relationship.**

AUTONOMOUS + GATED

SELF-HOSTED & SOVEREIGN

14 COMPLIANCE FRAMEWORKS
